Simplify Printing In Your Healthcare Environment

Despite all the advances in digitalization and imaging technology, printing continues to be a critical function for the healthcare industry. Process Fusion 360's Healthcare Printing Suite (HPS) enables speedy, error-free, and on demand secure printing from major EHR/EMR applications, with 100% uptime.

Comprised of 3 modules – Smart Route Printing, Smart Label Printing and High Availability, Process Fusion 360 HPS can be built into any computing environment, and accessed on desktop, laptop or mobile devices. The software-based solution allows users to print securely and on demand to any printer, including specialty printers for wrist band and prescription bottle label printing. This relieves care givers from the mundane, yet necessary process of document output in the fast-moving clinical environment, improving productivity and patient data security.

Key Benefits

EMR/EHR Integration

Security and compliance

Remote administration of printers, drivers, and users

Fast deployment of print

Reduced print-related IT support costs

Reliability

Key Features

Key Benefits

While VDI technology allows fast and secure access to EHR/EMR applications for roaming hospital users, location-based printing is still problematic. UniPrint Infinity's Smart Route Printing Module ensures that printers follow the users regardless of document or printer types (e.g. patient record printer; prescription, label or other specialty printers).

With Smart Route Printing, users can always print documents to the right printers, thereby improving workflow, productivity, and security compliance. Instead of wasting time on paper chasing or inundating help desks with printer support calls, care givers can now devote more time in providing quality patient care, and IT support can focus their time and attention on mission critical tasks.

Maximized Printing Uptime

PF 360's High Availability Module eliminates any single point of failure in the printing infrastructure ensuring 100% printing uptime. With load balancing, printing remains fast and efficient, guaranteeing an uninterrupted workflow process.

Multiple Vendor Support

The PF 360 printing solution is certified by Citrix, Microsoft and VMware to be fully compatible with their VDI or servercentric technologies.

Easy and Accurate Label Printing

Enables accurate barcode printing on labels for wrist bands and prescription bottles to specialty printers by "tunneling" the native file format.

Fast and Easy Printing from EHR/EMR

Printing from EHR/EMR apps can now be easily configured to ensure printers follow the users using Smart Route. Or by printing to the UniPrint™ Virtual Print Queue (VPQ), users are no longer required to decide which printer to use while using the apps and release at any device via SecurePrint.

Secure, On-Demand Printing

Our SecurePrint feature allows users to print to a single queue and release the print jobs at any MFD or printer using a combination of our built-in app for Ricoh, Xerox, HP and Lexmark or our vPad device for other brands. You can easily login using a variety of methods and print the job while you are there.

Low Upfront Investment & Proven ROI

Deploying the printer vendor-agnostic PF 360 software, healthcare organizations do not need to spend precious capital to standardize their printer fleet or assign dedicated IT staff to support their printing infrastructure.

"We no longer have to purchase high-end printers that cost \$3,000. We can use \$500 printers, and the PF 360 driver is on the only print server that needs to be updated. This initiative has resulted in more than \$100,000 in savings over the last 18 months."
