

Overview

Optimize your workflow with UniPrint Infinity v10 to experience fast and reliable printing across all types of computing platforms through a single PDF-based UPD and management platform. Whether deploying in the Cloud, VDI, server-based, mobile, serverless, or traditional environments, our single management platform offered by UniPrint Infinity is the solution for all of your enterprise's printing challenges!

Did you know?

- Cost of printing between **1 and 5%** of a company's annual revenue
- Global spend on Print is **\$130 Billion**
- 70% of organizations have experienced one or more **data breaches** through Printing
- Almost 50% of pages printed are **discarded** and over 20% are **never collected** from the Printer

Core Platform Features & Benefits

Centralized Management Console – Administrators manage one PDF-based UPD through the Centralized Management Console • The Web-Based Management Console can be accessed through any web browser using HTML5 • UniPrint Access Controls can allow or restrict access to individual features within the console • The console logs comprehensive user activity for audit purposes

PDF Conversion and Compression – PDF Conversion and Compression saves bandwidth use by over 90% • Reduce bandwidth usage over WAN connections • Through direct connection on the local subnet, print traffic is routed via the shortest path

PrintPAL Print Mapping – PrintPAL printer mapping utility allows centralized and consistent printer mapping based on Active Directory, IP addresses, or device names • Ensures that users are always assigned with the correct printers whenever and wherever they are working

Client Session Printing – Simplified Client Session Printing with auto-creation of client-side printers • A user's local printer can be created and presented within the remote session, enabling direct printing to the local printer

Virtual Print Queue – Users print to one Virtual Print Queue (VPQ) across the entire enterprise network, helping to eliminate printer mapping issues • Allows users to manage print jobs sent to the VPQ from within their user session

UniPrint Vault Mobile App – Support for releasing print jobs through Mobile • UniPrint Vault allows users to release their print jobs from a mobile device using QR codes, NFC, and iBeacon

Printer Profiles – Allows the creation of custom printer profiles • Allows for stapling, hole punching, stacking • Available per printer or driver

Statistics & Archiving – Enables the tracking and auditing of user print statistics • Know who prints what, where and when, and monitor for irregularities • Archive copies of print jobs in easy to use PDF-format for security or regulatory compliance

Additional Modules

Secure Pull Printing – Using the Virtual Print Queue (VPQ), users print to a single print queue and retrieve their print job when they are at the printer. Print jobs are encrypted and stored at a central location. Print jobs are only sent to the printer when the user authenticates.

Mobile Printing – UniPrint Share for Apple iOS/OSX enables users to print directly to any network printer, not just AirPrint certified printers. • Android users can print directly from their devices to corporate printers by connecting to UniPrint Print Service for Android. • Email2Print allows mobile users who are not connected to the corporate network to attach documents and send them via email to a particular printer for printing. • One-click installation with easy deployment and no client software required.

High Availability – Provides full redundancy, eliminating any single point of failure in the printing environment. • Ensures 24/7, maximum printing uptime. • Assures that printing remains fast and reliable in any enterprise environment. • Automatic synchronization for printer configurations between primary and secondary Print Servers in high availability environments.

Serverless Printing – Enables direct IP printing between workstations and network printers, eliminating the need for print servers • Solution focused on driver packaging, distribution and management, as well as printer management on the user's workstation. • The PrintPAL utility combined with direct IP printing, under one management platform, enables administrators to remotely assign printers to user workstations based on user-specific criteria including: username, endpoint name, organizational unit, and IP address range.

Healthcare Printing Suite – 3 modules that enable speedy, error-free, and on demand secure printing from major EMR applications, with 100% uptime. • **Smart Route Printing:** Role-based Printer Mapping allowing administrators to bypass EMR designated printers in Citrix, VMware View or Microsoft VDI environments, ensuring that print output follows the users. • **Smart Label Printing:** Enables healthcare workers to print directly to any specialty printer, whether label, prescription, laser, etc., without having to worry about where their print job is being released. • **High Availability:** Eliminates the risk of printing outages in demanding, fast paced healthcare settings.

UniPrint vPad Series

On-demand secure pull printing reduces waste and consumables. The vPad series is print vendor agnostic.

vPad CE devices feature print stream compression, solving bandwidth issues, and allow for consistently fast remote printing spanning wide geographical locations. The devices effectively replace the remote site Windows print server, allowing it to be consolidated into the data center. External card readers can be attached to the device for Tap and Print functionality.

vPad Pro devices use multi-dimensional print security through PDF encryption and user-authenticated pull printing. Users simply tap their RFID or HID devices on the vPad Pro and print on demand with added security • User-authenticated secure pull printing can be deployed in environments using MFPs, through the vendor agnostic VPQ Connector plug-in

Licensing

UniPrint offers a simple, cost effective licensing model based on concurrent user sessions. Customers only need to pay for the maximum number of users logged on at any one period. Licenses are sold in Packs, the higher the user count in the purchased pack, the better the price per user.

Qualifying Questions

1. Do you have a Print strategy?
2. Do you suffer with Print Driver issues?
3. Are you planning on moving print processes to the cloud?
4. How important is security within your companies print environment?
5. Are you investing too much time on heavy print system administration?
6. Do you require a mobile print solution?
7. Do you suffer with bandwidth issues due to printing from multiple locations?
8. Is cost a driver?
9. Do your users complain about printing to the incorrect printer, or not having the correct printer available?
10. Are you interested in secure pull print?
11. Is guest printing something you're interested in?
12. Would your environment benefit from a highly available print solution?
13. Would you benefit from tracking and auditing users print statistics?
