

```
#include <stdio.h>
int main() {
    // printf() displays the
    string inside
    quotation
    printf("Hello, World!");
    return 0;
}
```

```
#include <stdio.h>
int main() {
    // printf() displays the
    string inside
    quotation
    printf("Hello, World!");
    return 0;
}
```

```
#include <stdio.h>
int main() {
    // printf() displays the
    string inside
    quotation
    printf("Hello, World!");
    return 0;
}
```

 Process Fusion 360

PF 360 Data Capture Solution

Workflow
Reimagined

Automate Document Intensive Processes

Process Fusion 360 Capture's intelligent capture solution automates content input using OCR and machine learning, which removes unnecessary steps and increases the velocity of routing relevant data to the right users and systems in the organization.

The advantage of deploying an intelligent capture solution is that your digital workflow possibilities become endless. By controlling and automating decisions based on metadata and classification, it allows your organization to truly adapt in the next normal.

Intelligent Capture Benefits

Save Time

Automate a single point of capture that extracts and sends relevant data to lead systems with real time information.

Reduce Manual Processes

Eliminate time consuming manual data entry tasks and focus staff on higher value priorities.

Simple User Experience

With a simple cloud-based web console, all users, documents and processes can be easily accessed through a single platform.

Secure & Compliant

Automate classified data based on all types of security and compliance tags to ensure that incoming data is secure.

Use Machine Learning And Transform Your Document Data Into Real Business Value .

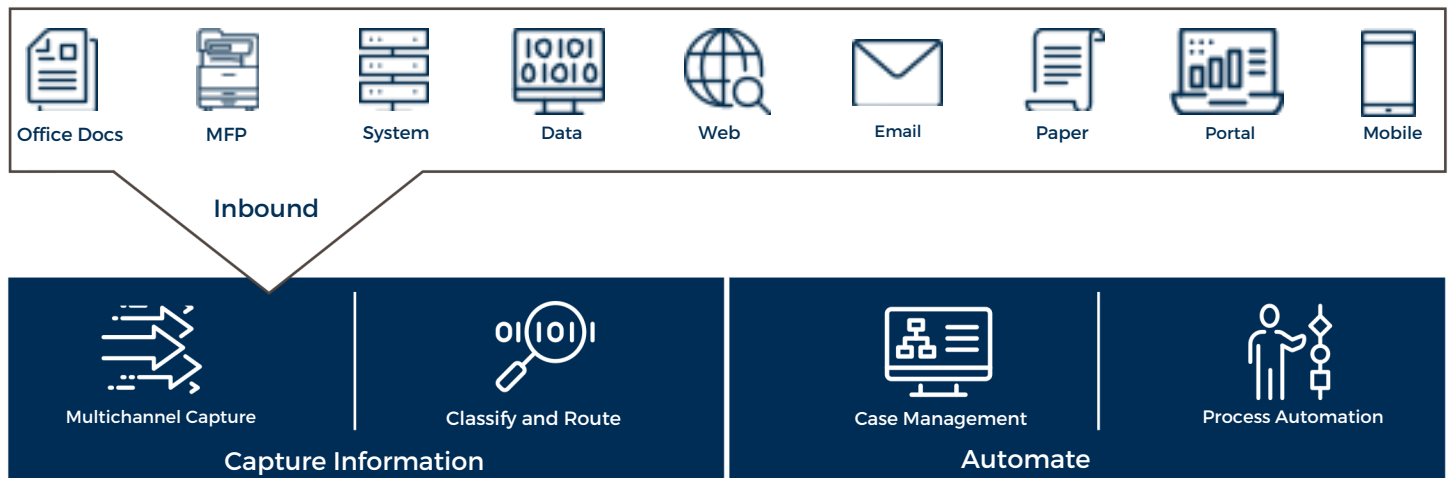

Intelligent Capture Features

Transforms all paper and electronic documents into business ready content, scaling to meet any requirement

Forms Classification and Extraction	Automated Document Profiling	User Permission Management	Custom Workflows
<p>Intuitively capture document data based on rule sets and machine learning to extract out specific key terms and sequences</p>	<p>Associate information (ex: date or vendor ID) with a document automatically before it gets to the next workflow step.</p>	<p>Configure specific users or group permissions such as workflow visibility, and specific intelligent capture features.</p>	<p>Configure custom document process workflows that are specific to your organizational needs with limitless possibilities.</p>
Automated Faxing	Machine Learning	Dashboard Analytics	Process Integration
<p>Automatically send digital faxes to preconfigured numbers based on workflow triggers, without manual processes and interventions.</p>	<p>Users can train the system to continuously learn and improve document capture and processing based on feedback from users.</p>	<p>Analyze and assess document workflows, based on unread files, pending files, expiring files, number of documents per workflow etc.</p>	<p>Seamlessly connect with backend databases, content management systems, EMRs, ERPs, and any other internal systems.</p>

How It Works

The solution is a true multi-tenanted, cloud capture solution that offers an omni-channel inputs for capturing everything from paper documents or faxes to chat bots. It provides further operational efficiency by classifying and routing data that comes into the organization and automating processes for standard documents, like accounts payable, or complex documents, such as contracts, that require actions based on the content.
