

# UniPrint Infinity for Microsoft 365 Windows Virtual Desktop

UniPrint Infinity for Windows Virtual Desktop offers a complete solution, including data compression and encryption, without the need to install any VPNs, static IPs, or inbound ports in firewalls onto WVD hosts. The solution is meant to connect hosted WVD environments to local print environments, while enhancing the overall user printing experience.

## Key Features

UniPrint Infinity enables Windows 10 multi-users fast reliable printing, while providing IT admin easy management of print queues per session and user, providing the right printer to the right users, at the right time. It not only handles printer assignment and printer queue creations for local and network printers, it also takes care of print redirection processes as well.

### Automated Deployment

Automate printer deployment without the need for copying, embedding or installing drivers in the pool image.

### Printer Assignment

Manage and assign printers in Windows Virtual Desktop sessions through the Windows 10 image.

### Connect any Printer

Make any printer available to users in their WVD sessions, including local, network, cloud printers etc.

### No VPN or Subnet

Directly connect network printers to users based on Active Directory, workstations, devices or physical location.

### Unified Management

Manage printing across all WVD sessions, including cloud, on-prem & local desktop on windows 10, server or 7.

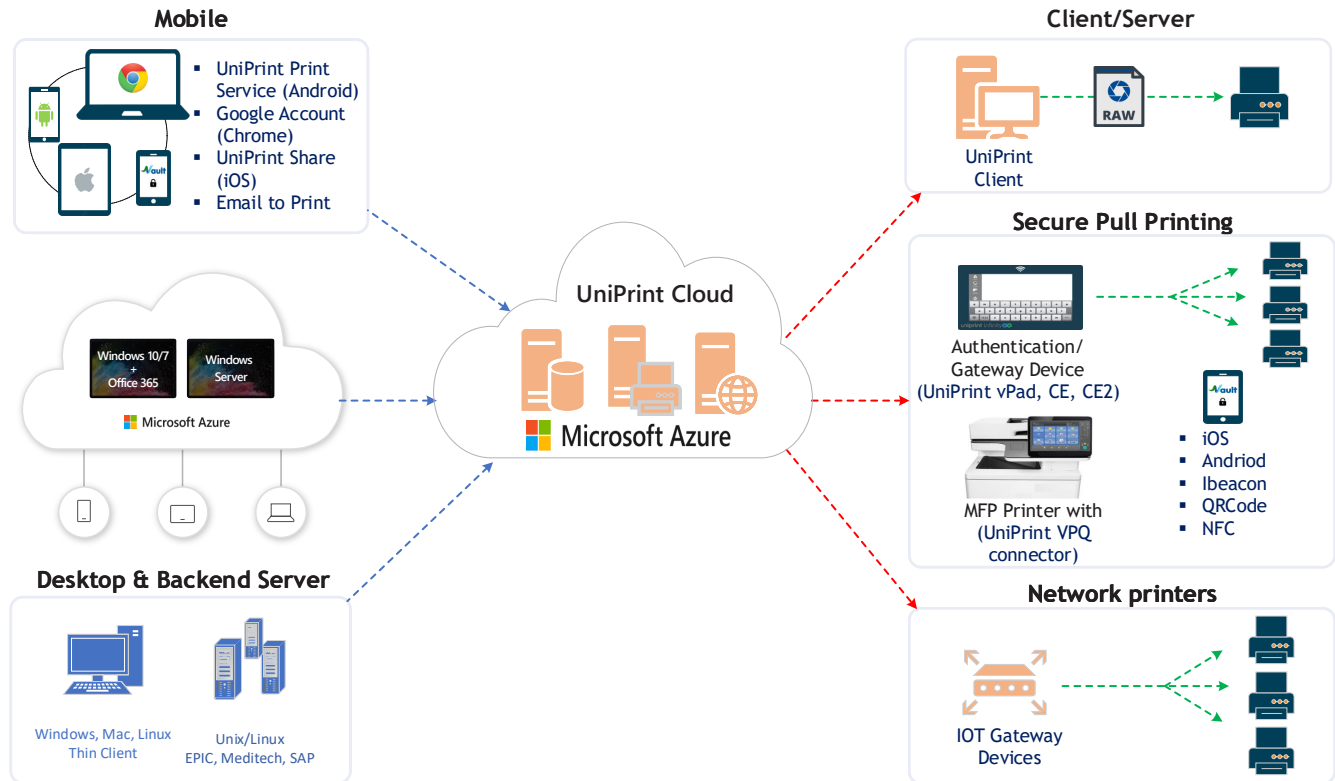

### Secure Pull Printing

Enable users to perform fast secure printing from any device to any printer, regardless of their device or network.

## How it works

All printers, including network and local printers, become remote printers when Windows Virtual Desktops are running on Azure. Because desktop WVD sessions no longer are dependent on typical desktop devices, you can use it on any device including smartphones, tablets, Macs, Chromebooks or even just a web browser.

## Key Benefits

### Scalability

UniPrint's cloud-native platform running on Azure is designed to grow dynamically with usage and distributes workloads across multiple nodes.

### Plug & Play

With the vPad, any printer becomes a remote print server, just plug it into the network and all printers will become immediately available.

### Seamless Integration

UniPrint is seamlessly integrated with Azure Active Directory, so no additional user account creates are needed. Users simply just print normally as expected.

### Enhanced Security

UniPrint is built based on the highest security standards in compliance with GDPR, enabling dual user authentication and 256-bit encryption.
