

UniPrint Infinity Secure Pull Printing

Secure Documents, Improve Workflow and Reduce Costs

UniPrint's PDF-based Universal Printer Driver (UPD) and single Virtual Print Queue (VPQ), UniPrint Infinity offers dual print security through AES PDF encryption and user-authenticated secure pull printing. Secure pull printing helps eliminate possible damages associated with security breaches, or corporate espionage resulting from sensitive documents being left in the printer trays unattended, or picked up and viewed by unauthorized personnel. Pull printing also eliminates unnecessary print output, by forcing users only to print out what they need.

vPad Print Appliance

The UniPrint Infinity vPad print appliances are fully compatible with any smart card reader. Existing RFID or HID smart cards, or fob devices being employed by organizations can be easily registered at the vPad Pro, CE and CE II.

User authentication is simple and can be self-administered. At the first use, a user taps their RFID/HID smart card or fob device on the vPad and their corporate ID is read. For added security, the user can also create an alpha-numeric password as a required step to release print jobs.

- Dual Security via PDF encryption & secure pull printing
- Touch screen
- Built-in RFID or HID smart card/key fob reader
- Near Field Communication (NFC) capable
- Print Stream Compression
- Remote Print server gateway device
- One-to-multiple printers support
- Compatible with any computing environment

UniPrint vPad CE2 and Pro

Multi-purpose print appliances designed to enable on-demand secure pull printing.

Embedded VPQ Connectors for Multi-Function Printers

UniPrint's VPQ connectors are designed to be embedded onto any multi-function printer including Xerox, Samsung, HP, Brother, Ricoh etc. to enable secure pull printing to network printers via the virtual print queue.

- Seamless interoperability with a single intuitive interface on the MFP control panel
- Option to use smart card reader to authenticate release
- Can deploy secure pull printing in a multi-vendor printer infrastructure

VPQ Connector

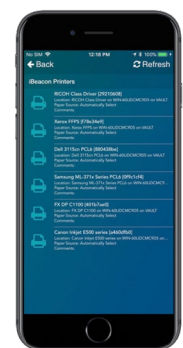

Can be embedded in Xerox, Samsung, HP and Brother MFPs to enable secure pull printing.

UniPrint Vault Mobile App

The UniPrint Vault is a mobile app that enables any Android and iOS devices to print directly to any organization printer through UniPrint's Virtual Print Queue, without having to go through other print software. UniPrint Vault works in conjunction with UniPrint Infinity Suite or InfinityCloud to provide a universal printing experience for users wanting to release print jobs at their corporate offices.

By preventing confidential documents from going through the public cloud, you can ensure secure printing for your enterprise.

- Intuitive and friendly user interface
- Easily integrates with UniPrint secure pull printing

Vault App

Users can release print jobs at corporate offices or public print locations using the mobile app.
