CDPH Resources to Communicate the Importance of MMR Vaccine

Although measles has been mostly eradicated in the United States, recent outbreaks around the country and world highlight the importance of vaccination.

The measles-mumps-rubella (MMR) vaccine provides the best protection against disease and serious illness. Strongly recommend MMR to:

- All babies starting at 12 months of age
- Infants 6 months and older traveling abroad. These babies should still get their 12-month MMR vaccine.
- Children ages 4 to 6 years due for their 2nd dose.

For more information and resources, visit the [CDPH Measles Communication Toolkit](#). We also encourage you to share personal stories from [ShotbyShot.org](#), a collection of stories told by people affected by vaccine preventable-diseases, including:

- [Emmalee's Story](#) – Adopted from India to a loving family in Pennsylvania, Emmalee passed away after a rare complication of measles, subacute sclerosing panencephalitis (SSPE). Her story emphasizes the importance of MMR vaccination to prevent disease and death. Share her story with patients.

CDPH Immunization Updates for Providers Friday, June 28, 2024

Please join CDPH **tomorrow, Friday, February 21, 2025, from 9:00 am - 10:30 am (PT)**, for the CDPH Immunization Updates for Providers webinar, occurring every other Friday.

CDPH subject matter experts will provide updates, resources, and answer attendees' vaccine questions. This Friday's session will also include information from the Provider Enrollment Team, Vaccines for Adults, Vaccines for Children, and the California Immunization Registry.

Please ensure someone from your staff attends to hear these relevant and timely updates.

Reminder: Continue Administering RSV Immunization though March 31, 2025.

Please continue recommending and administering the RSV immunization to eligible infants and toddlers until the end of March. RSV immunization is the best way to protect our youngest patients from severe illness and hospitalizations. As a reminder, providers may check the California Immunization Registry (CAIR) or ask the birthing parent to download their digital vaccine record at mydvr.cdph.ca.gov to verify receipt of prenatal RSV vaccine. For more information, see our [RSV FAQs](#) and [resources](#).
