New Tools to Communicate the Importance of Flu Vaccine

Flu is still surging – help protect your patients with flu vaccination! It’s not too late —everyone 6 months and older should get the updated flu vaccine to prevent severe illness and hospitalization.

We have two NEW tools to help promote flu vaccination:

- [Isabella's Story](#) – this new [ShotbyShot.org](#) story emphasizes the importance of flu vaccination. Isabella, who wasn't vaccinated, faced severe complications and now lives with permanent disabilities due to the flu. Share her story with patients.
- [Template Letter](#) – this is a customizable letter to remind patients to schedule their flu vaccine.

For additional flu and respiratory disease materials, check out this [EZIZ page](#). Thank you for all you do to help patients this respiratory virus season!
