

# Are You Confident in Your Cybersecurity Precautions?

## Cyberattacks happen every day and criminals are not going to stop trying to breach your systems. How can you tell if you are prepared?

Organizations with strong cybersecurity protocols and precautions can answer “Yes” to all these questions:

-  Do we train our staff in cybersecurity awareness and incident prevention at least annually?
-  Do we have the necessary tools to monitor our environment and detect incidents?
-  Do we have a comprehensive Incident Response Plan?
-  Have we tested our Incident Response Plan using multiple tabletop simulations?
-  Do we have the necessary governing policies in place to protect our organization?
-  Have we trained our staff in those governing policies?
-  Do we regularly test our employees with phishing email tests?
-  Have we performed an objective, third-party cybersecurity assessment to identify security gaps in our environment?
-  Did we take action based on the findings?

If you were unable to answer yes to all these questions, you may have vulnerabilities in your cybersecurity plan. The time to assess your readiness is now. Doing so after you've had a ransomware attack or phishing incident is too late.

## Segal can help

Our Administration and Technology Consulting professionals specialize in working with organizations to:

- Train staff and leadership with cybersecurity awareness classes. These classes meet the National Institute of Standards (NIST) Cybersecurity Framework expectations for employee training.
- Develop comprehensive Incident Response Plans
- Test and improve Incident Response Plans with challenging tabletop simulations
- Develop cybersecurity governance policies
- Conduct cybersecurity workshops with senior leaders to identify organizational cybersecurity strengths and weaknesses
- Conduct detailed cybersecurity risk assessments and identify improvements
- Work with third parties to create phishing campaigns to test employee awareness
- Assist in procuring cybersecurity insurance
