Chatbots answer. Star Agents execute.

Persistent, governed AI agents that execute real operational work.

Your systems generate thousands of signals a day, but the work between them still falls to people. The coordination holding your operation together is manual, repetitive, and doesn't scale.

Star Agents: Turn AI into operational action

UNDERSTAND → PLAN → ACCESS → ACT → CONFIRM → LEARN

Persistent, role-based AI agents with memory, skills, and autonomy.

Star Agents operate continuously, monitoring systems, coordinating workflows, and executing operational work with approvals and audit trails on every action.

Give Stars a role and let them carry the work forward

Configure once, run continuously with your approval

Take on defined roles, monitor systems, and run routines 24/7, responding to triggers and changing conditions without ongoing prompting boundaries

Computer Use

Use a virtual computer to interact directly with browser-based applications

Build once, share across the team

Share Star Agents with colleagues to save setup time and keep processes consistent

Native & legacy access

Work across modern systems through APIs and legacy applications through connectors that use approved data sources and write back to connected systems

Governance & control

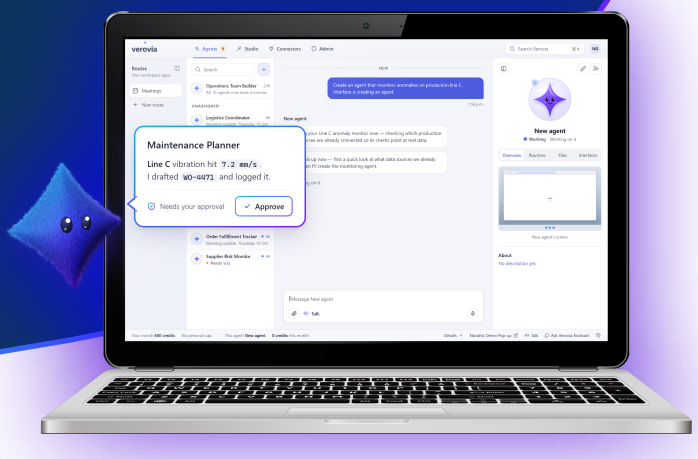

Manage permissions, approvals, budgets, and AI usage with built-in guardrails and audit trails

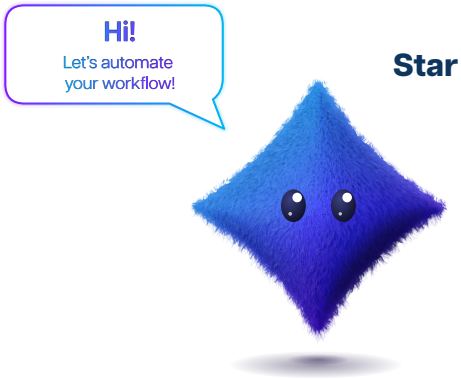

Co-create agents with your colleagues

Bring the whole team into a single shared conversation with the same agent, moving it forward together instead of working in parallel

Verosoft

Let Humans Innovate While AI Automates

Star Agents handle routine tasks so your team can focus on decisions, exceptions, and higher-value work.

- Reduce repetitive work
- Respond faster to operational issues
- Maintain human oversight for sensitive actions

25–40%

potential reduction in time spent on low-value work with AI agents
