The Fastest Path to Industrial AI

Put AI to Work Across Your Industrial Operations. Faster.

Transform your AI investments into operational action with Verovia, a Microsoft-first AI orchestration and automation platform built to bring IoT and SCADA data into the same workflows as your ERP and MES data.

Scale faster

Move from pilots to real operational workflows faster by connecting AI to the systems your teams already use.

Protect your company

Keep AI activity controlled with permissions, approvals, policies, and audit trails managed by IT.

Activate industrial data

Bring IoT and SCADA data into AI-powered workflows so signals from equipment and operations can trigger real business action

Microsoft-first, with equipment reach beyond it.

Verovia is built around Microsoft 365, Dynamics 365, Business Central, and Azure; the stack most of your team already uses. That is the foundation, not the ceiling: Verovia extends out to the MES, WMS, SCADA, IoT, and legacy systems Microsoft does not reach on its own, through the same governed connections.

Dynamics 365 · Microsoft 365 · Copilot · Azure SQL · Fabric

Tago · AUGURY · SAMSARA · Ignition

25-40%

potential reduction in time on low-value work with AI agents

Boston Consulting Group, 2025

$60K-$235K

saved per year vs. traditional custom app development

Verosoft internal analysis

Prove it in your own environment

Deploy a governed workflow on your live systems for **free**, with no migration required.

Three connected modules, one industrial AI platform

Star Agents

Turn AI into operational action

Governed, role-based AI agents with memory, skills, and autonomy. They respond to changing conditions, monitor systems, coordinate workflows, and execute operational work continuously, not just when someone asks a question. With computer use, when there's no API, a Star can work a browser-based or legacy application the way a person would.

AI Studio

Deploy custom apps everywhere in minutes

AI Studio turns a plain-language description into a working app, wired to real data, in minutes.

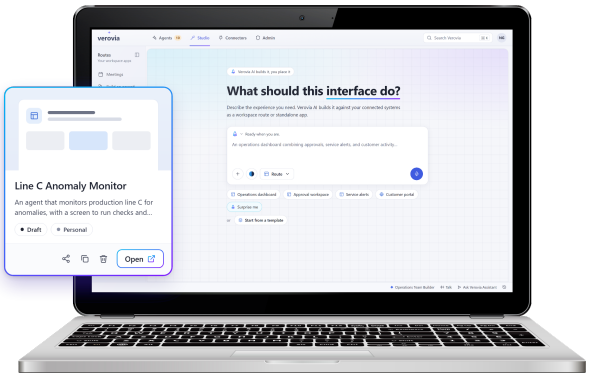

Connectors

Unify shop floor and office workflows

Connect Microsoft, ERP, SCADA, and other business and operational systems once, then reuse those approved connections across Star Agents, apps, and workflows.

No API? No Problem.

With computer-use capabilities, a Star can seamlessly navigate and interact with browser-based and legacy applications, unlocking secure automation beyond traditional integrations.

Governed by design, built for control

Keep people in control

Set human approval rules for sensitive actions, route sign-off through Teams, and log every decision.

Prove what happened

Maintain tamper-evident audit trails with read-only auditor access and exportable records.

Keep control of your data

Use tenant isolation and Zero Data Retention by default, with customer-hosted Azure Foundry options for data residency, encryption, and key management.

Reduce access risk

Use Microsoft SSO with Entra ID, role-based access, and least-privilege connector permissions that can be scoped and revoked at any time.

Support compliance requirements

Apply controls aligned with ISO/IEC 42001, ISO/IEC 27001, SOC 2, IEC 62443, OSHA PSM, and ISO 45001.

Deploy policies safely

Test rules in monitor-only mode before enforcing them.

Turn ideas into outcomes with your team

Create together

Build agents and apps from one shared starting point.

Manage in one place

See ownership, progress, approvals, and what is live.

Reuse what works

Share agents and apps so other teams can start further ahead.
