Health Trends 2026

Balancing cost control with benefits optimization

Global infographic

benefits that truly benefit

Trend

Projected medical trend continues to be double digits in most markets.

Proactive risk management is a requirement for sustainable benefit programs.

Benefits coverage for varied needs remains limited.

What it means

While insurers are adjusting their projections for broader economic uncertainty, underlying claim costs continue to be driven by everpresent health conditions.

Most cost management levers are not typically included under plans today; some of these controls can curb spending, without impacting health outcomes.

Many existing plans are not designed to meet the needs of today's workforce, with gaps in cover for not just unique health needs, but universal needs as well.

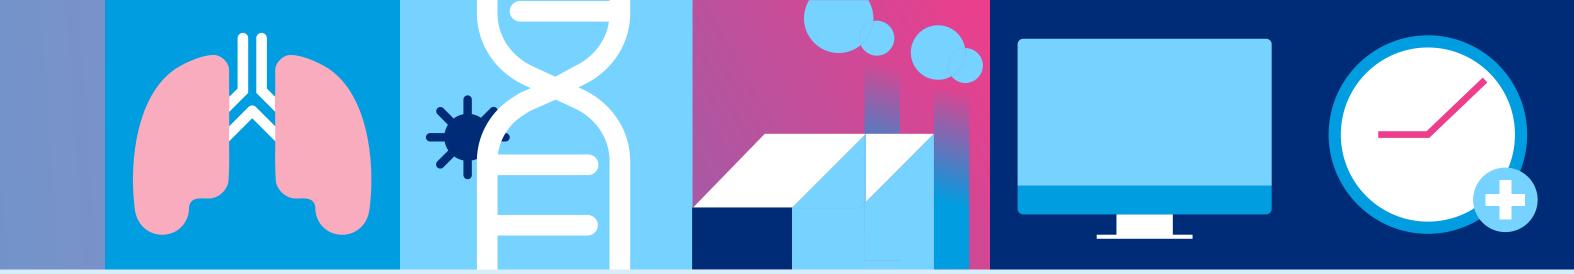

Key finding

High-cost claimant management is the #1 intervention insurers plan to deploy or enhance in the next two years.

76% of insurers are concerned about inefficient and wasteful care making plans unaffordable over the next three years.

Just 50% of insurers globally typically cover mental health counselling; 23% cover hearings aids.

Projected medical trend continues to be double digits in most markets

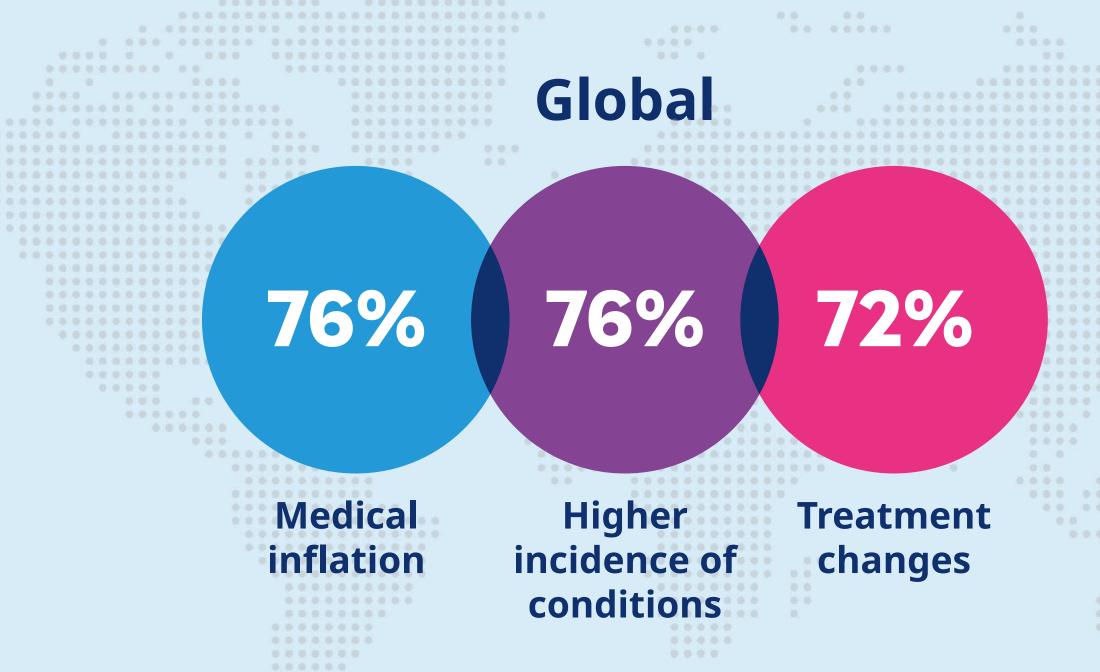

2024-2026 Medical Trend

	2024	2025	2026
Global (Ex-US)	10.6%	10.8%	11.1%
Canada	7.0%	6.9%	8.6%
Asia	12.2%	12.4%	12.5%
Europe	10.3%	9.5%	9.1%
Latin America and Caribbean	9.8%	10.1%	10.4%
Middle East and Africa	10.9%	12.5%	14.1%
Pacific	10.0%	11.4%	10.8%

Note: Rates for 2024 are retrospective. Rates for 2025 and 2026 are prospective. Unweighted global averages were used. This data was gathered in June and July 2025 from 268 insurers, with medical trend rates submitted by insurers and validated by our local teams using their own internal book of business data, market-specific insurer surveys, economic forecasts and subjective assessments. Please note the US is not part of the research. For more information related to the US, please see Mercer's 2025 National Survey of Employer-Sponsored Health Plans.

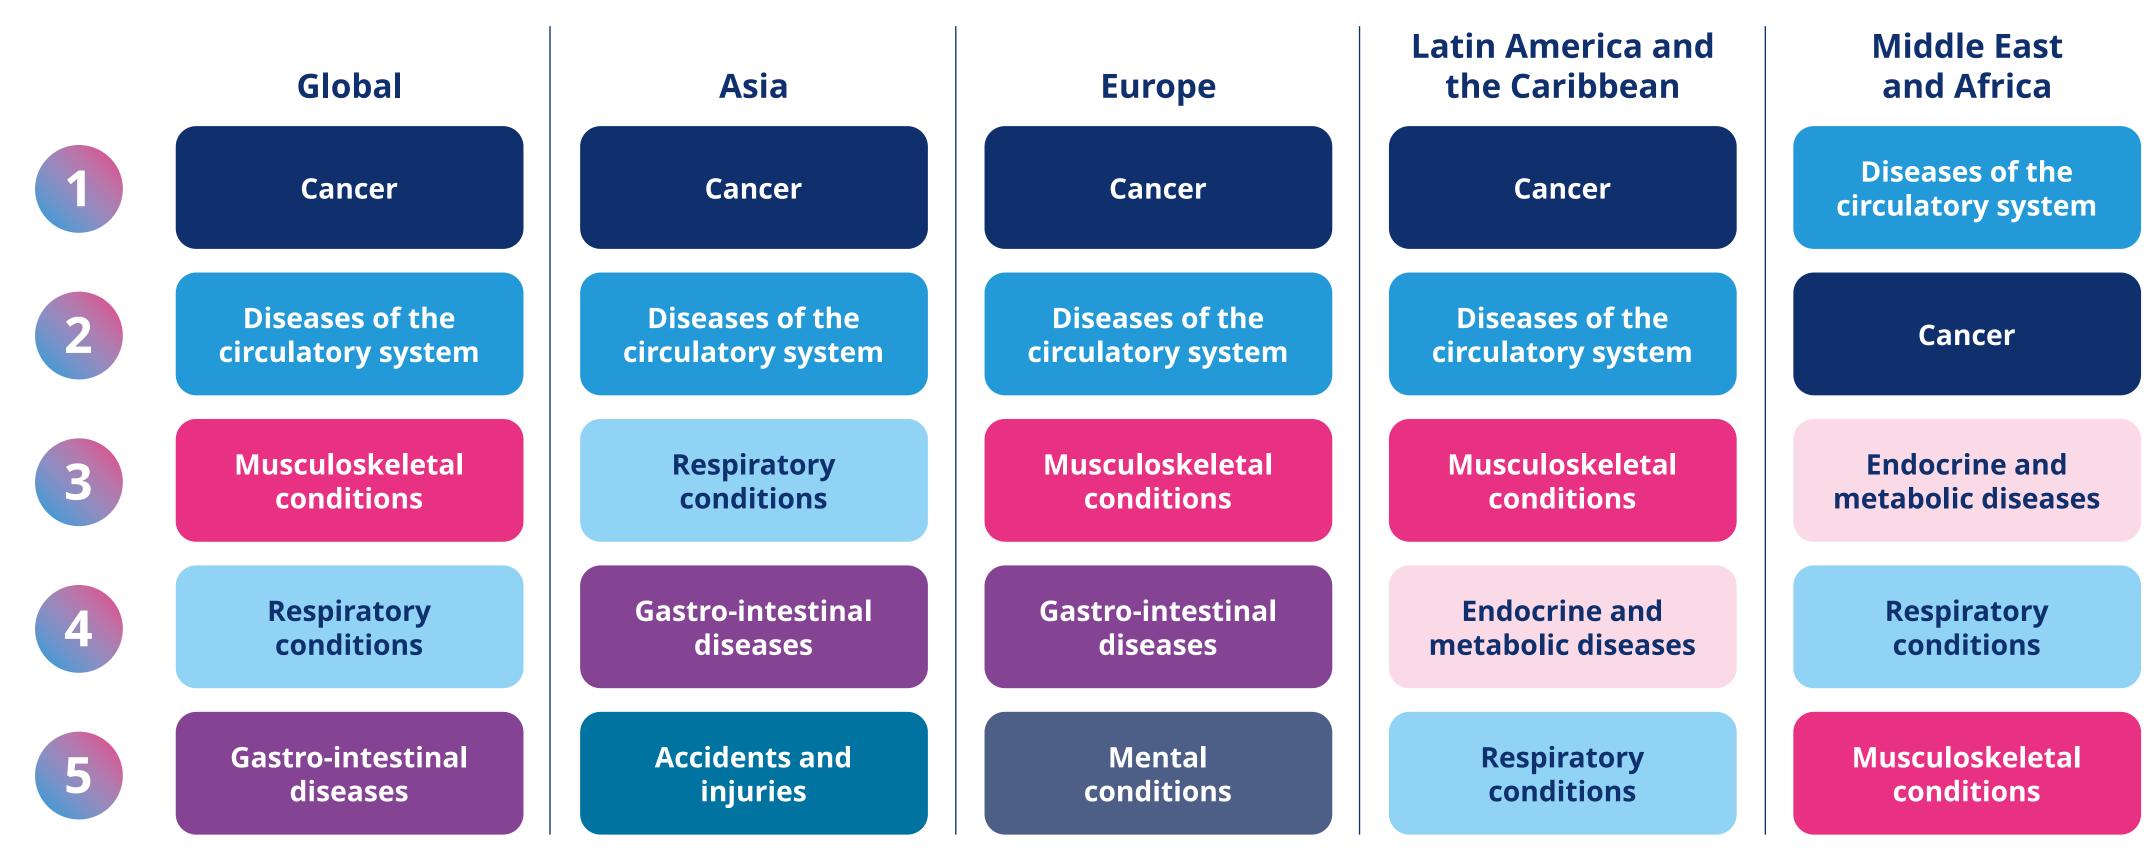

Top three components driving projected 2026 medical trend

How do you expect each of the following trend components will impact your market's projected 2026 medical trend rate? (Very significant + significant; top three)

Cancer, circulatory diseases, musculoskeletal and respiratory conditions continue to be top causes of claims in the majority of regions surveyed.

Top causes of claims based on dollar amount in 2024:

Musculoskeletal supports

Musculoskeletal (MSK) conditions affect the joints, bones and muscles, and can be marked by acute or chronic pain, reduced mobility and dexterity often restricting people's ability to work and fully participate in daily life.

Several factors increase the risk of developing MSK – particularly lower back pain, including:

- Sedentary lifestyles and lack of regular physical activity
- Excess body weight
- Smoking and high alcohol consumption
- Working conditions including poor workplace ergonomics

Employers can support employees affected by MSK through introducing multilevel interventions and protective measures, from prevention and treatment to safe return to work.

Ergonomics and worksite safety:

- Desk jobs: chairs/supports for healthy posture
- Non-desk jobs: safety/manual handling training, lifting supports, workplace assessments, AI-powered or wearable sensor technology for movement tracking

Preventive care:

- Strength and flexibility programs and training
- Maintaining a healthy weight
- Physical activity

Early intervention:

- Early assessment
- Triage support

Treatment and rehabilitation:

- Cover for timely needed healthcare, while mitigating risk of unnecessary surgeries
- Physical therapy, including onsite, virtual and AI-powered options to increase adherence
- Cover for specialist pain management and optimization of medication

Support in returning to work:

- Graduated return to work plans to reduce re-injury
- Flexible arrangements, modified duties and accommodations
- Manager training

Respiratory conditions

Respiratory conditions, such as chronic obstructive pulmonary disease (COPD), the flu, asthma, pulmonary hypertension, consistently rank among the top five causes of global health claims, both by dollars billed and claims volume. These conditions take a heavy toll on daily life, work productivity and healthcare systems.

While asthma and factors, particularly **COPD** cannot be cured, effective management can help people to control the symptoms and greatly improve their quality of life. **Employers and insurers** can play a pivotal role by supporting workforce through comprehensive programs.

Environmental risk is ranked #8 risk factor for health claims globally; #6 in Asia¹

> 1 in 4 (26%) employees say they or their family has experienced worsened physical health conditions (e.g., asthma, heart disease, allergies, etc.) due to a changing climate²

Respiratory conditions are #2 cause of claims globally in terms of frequency

(#1 in Asia and Latin America and the Caribbean) and #4 cause of claims in terms of cost¹

Proactive risk management is a requirement for sustainable benefit programs

Top employer-sponsored medical affordability concerns for the next 3 years

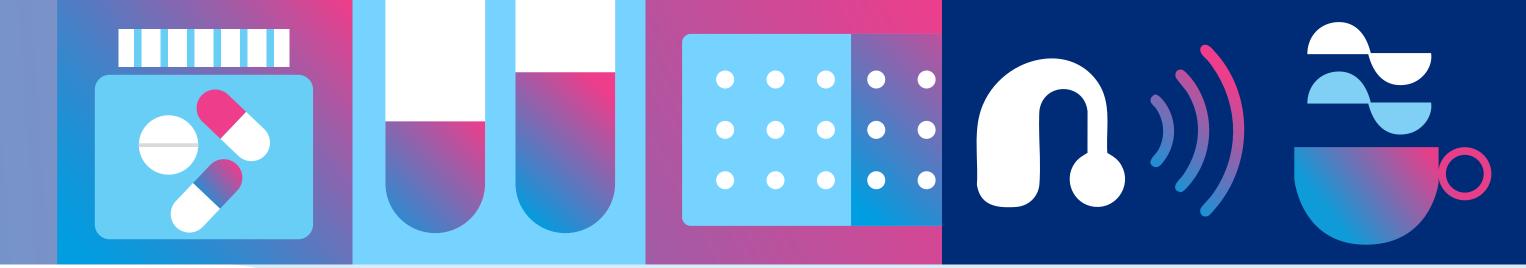

Cost containment options typically included for employer-sponsored private group medical insurance (Top 3 and Bottom 3)

Related to cost containment options, which of the following does your company typically include for employer sponsors of private group medical insurance?

Benefits coverage for varied needs remains limited

Meeting the workforce's unique benefit's needs sets you up for success and powers the productivity of your people.

When employees have benefits that meet their needs

79%

When employees have benefits that do not meet their needs

30%

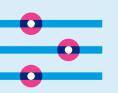

When employees have benefits that meet their needs

84%

When employees have benefits that do not meet their needs

55%

To support healthy aging, employers can:

Cover physical therapy/rehabilitation, mental health services and vision and dental support

Cover hearing aids, reading glasses, as well as menopause and andropause support

Invest in prevention by covering routine visits with a primary care practitioner and offering cancer screenings (e.g., mammograms, testing kits)

To support members' mental health employers can:

Offer cover for psychological and/or psychiatric counselling sessions

Promote high quality virtual solutions for anxiety, sadness or relationship issues

Consider including substance use/abuse treatments

Conclusion

It is now crucial to optimize investment in your employees' health and benefits.

Benefit optimization

Changing benefits mix and strategy to deliver more value

 Maximizing value of benefits to the individual and organization across health, risk protection and well-being, time off and perquisites

Health and quality improvement

Managing utilization through higher value care and support

- Addressing benefit adequacy and gaps (e.g., global minimum standards)
- Prevention and managing health/disability
- Steering to high value care

Cost management

Addressing affordability for both employee and employer

- Packaged pricing
- Removing unneeded frictional costs
- Coordination with public health

Cost shifting

Increasing portion of cost paid for by employee vs employer

- Restricting eligibility
- Claims and premium sharing
