

Take control of your construction supply chain risk

Building resilience with Sentrisk

In an effective construction supply chain, materials and equipment are available when and where needed, allowing projects to run smoothly and efficiently. However, managing supply chain disruption is getting harder, as global supply chains become more complex.

INTRODUCING SENTRISK

Your risk partner for the future

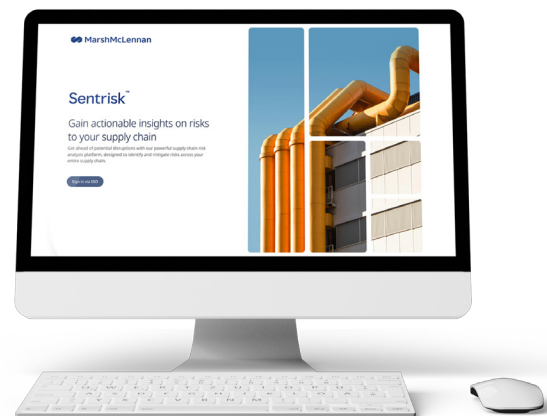

Sentrisk provides comprehensive assessments of supply chain risks, evaluating potential vulnerabilities at the company, product, component, and individual supplier levels. It does this by using supply chain mapping AI and advanced geospatial satellite imaging to collect site and hazard-specific risk data.

The platform's capabilities also enable you to monitor and mitigate risks proactively, enhancing your supply chain's resilience against unforeseen challenges. These risks may include natural hazards, geopolitical, credit, structural, regulatory, and concentration risks.

Sentrisk's offerings can be tailored to meet your project's specific needs, including:

- **Detailed supplier reports:** Gain access to validated supplier information, helping you to make informed decisions
- **Diagnostic reports:** Receive detailed assessments of your supply chain risks, complete with actionable mitigation recommendations
- **Platform access:** Keep informed and prepared with access to real-time alerts and data refreshes

Let Sentrisk help you navigate the complexities of supply chain management with confidence.

Benefits

Uncover your risk

Improve resilience by assessing supply chain risks

Understand your risk

Faster recovery from disruptions through clarity of exposures and supply flow; transparency supports regulatory disclosures; and simulation and contingency planning can inform investment decisions

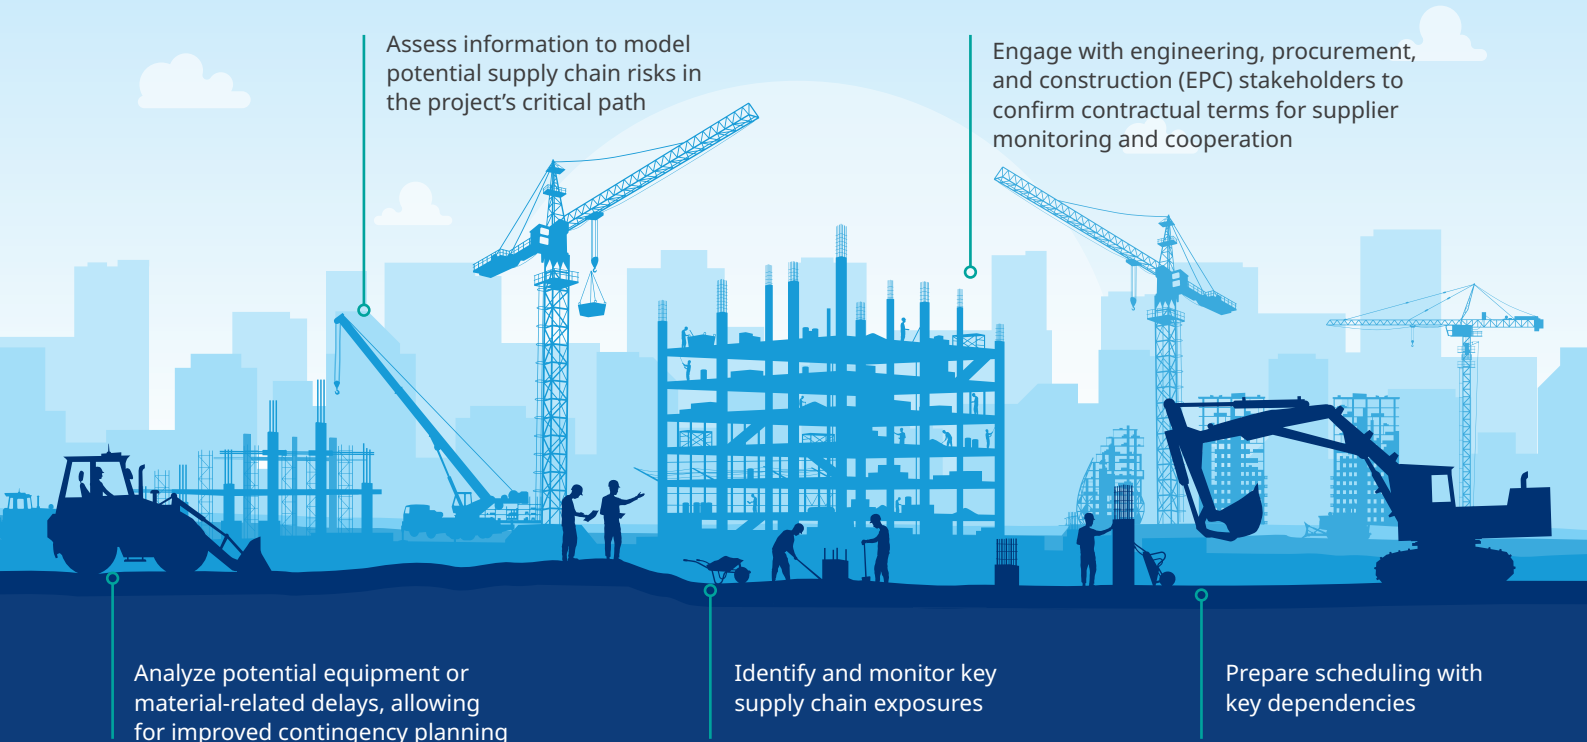

Transfer your risk

Improve your insurance coverage and expedite claims with more robust information

SENTRISK'S APPLICATION IN CONSTRUCTION PROJECTS

Sentrisk can provide detailed supplier risk analysis and alerts throughout the lifecycle of construction projects.

During project planning

- Identify upstream suppliers of critical OEMs and spare parts and validate site details
- Analyze production or transportation risks that could cause delivery delays
- Provide data to assess impacts on critical paths and inform contingency planning
- Inform negotiations on EPC contracts:
 - Incorporate supply chain disruptions into project timeline discussions
 - Devise contractual terms by accessing OEM and suppliers and their obligations
- Share enhanced project risk profile with insurers and lenders

During project execution

- Prioritize schedule of critical suppliers, including sub-suppliers that represent high disruption risks
- Expand site visit and inspection scope to include their contingency plans and resiliences to downtimes
- Monitor risk events (natural, geopolitical, etc.) that could impact suppliers and sub-contractors and proactively manage potential disruptions
- Incorporate supply chain disruptions in project contingency plans
